tables corresponds to a unique source identification tag associated with a particular film type, and wherein the statistical noise data within a given default statistical table is related to a particular film type; utilizing pixel image data from a digital image to calculate a statistical noise data table corresponding the digital image; utilizing a source identification tag corresponding to the digital image to select a default statistical table from the plurality of default statistical tables; and utilizing the selected default statistical table in conjunction with the statistical noise data table corresponding to the digital image to generating a resultant calculated noise characteristic table.

Dependent claims 4-6, 8-12 and 27 are also allowed for the same reasons as above.
